EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The specification of present application in page 1 lines 3-16 has been amended to update current information as follows:

[0001] This application is related to abandoned U.S. Patent Application Serial No. 09/802,744, filed concurrently herewith by inventors Joel Page, Wai Liang Lee and Erng Sing Wee, entitled "AN INTEGRATED CIRCUIT ARRANGEMENT FOR MULTIPLE-SENSOR WPES WITH ~~SELECTABLE FRONT ENDS~~ SELECTING A DIGITAL FILTER INPUT SIGNAL" (Morney Docket No. 1077-CS).

[0002] This application is related to U.S. Patent ~~Application~~ Serial No. 6,434,213, filed concurrently herewith, by inventor Trenton J. Grale, entitled "LOW-POWER LOW-AREA SHIFT REGISTER" (Attorney Docket No. 1076- CS).

[0003] This application is related to abandoned U.S. Patent Application Serial No. 09/803,350, filed concurrently herewith, by inventors Trenton J. Grale and Sijian Chen, entitled "PROGRAMMABLE TEST MODULATOR FOR SELECTIVELY

GENERATING TEST SIGNALS OF DELTA-SIGMA ORDER N" (Attorney Docket No. 1121-CS).

2. Claims 1-7, 9-12, and 14-16 are allowed.
3. Claims 8 and 13 are cancelled.
4. The following is an examiner's statement of reasons for allowance:

The prior art of records fails to disclose or render an obviousness of a programmable integrated circuit comprising a bus, a processor, a serial data output register; and a data interface for receiving external digital signal having different characteristics for filtering; wherein data interface provides an output selectively to one of two different sinc filters provided by the processor as cited in independent claims 1 and 15; wherein cells of the serial data output register not needed for delay operated in a reduced power mode in which power is removed from cells not needed for delay during reduce power mode as cited in independent claims 14 and 16.

The closes found prior art is Schreiber et al. (U.S. 6,456,219). Schreiber et al. disclose an analog-to-digital converter including delta-sigma modulator, decimation filter, and serial port interface that would operate in sleeping mode. The device comprises a bus, a processor, a serial data output register, and a data interface. However, Schreiber et al. fail to disclose the data interface provides an output selectively to one of two different sinc filters and the power is removed from cells not needed for delay during reduce power mode as cited above.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
